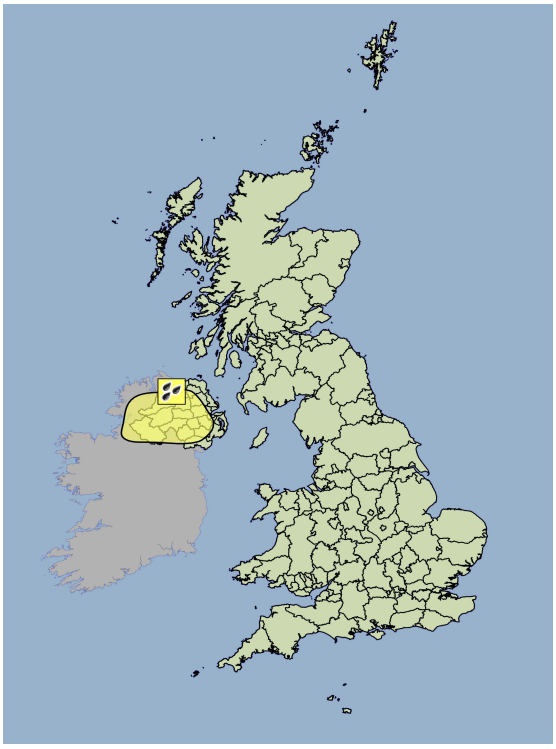
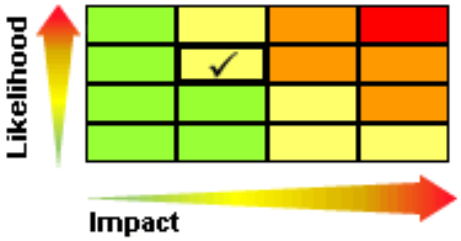
National Severe Weather Warning Service





Chief Forecasters Assessment
A developing Atlantic low pressure system is expected to move northeastwards just to the west of Scotland on Friday. This will push further bands of locally heavy rain across the area with 10 to 20 mm quite widely. Given existing levels of saturation, this could lead to some flooding.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **00:05 on Fri, 03rd Jan 2014** until **12:00 on Fri, 03rd Jan 2014**

Another spell of unsettled weather is expected on Friday with further wet and windy conditions likely across Northern Ireland. In addition, there is the risk of a spell of snow above about 300 m early in the morning.

This is an update to the Alert issued on Wednesday.

The public should be aware of the risk of localised watercourse or surface water flooding.
